

ACTUATOR ACCESSORIES

Limit Switch Box

TECHNICAL DATA

The data plate fields for this product could not be read from the source catalog. Values must be confirmed by the company.

WHAT IT DOES

A limit switch box is mounted on the actuator to sense whether the valve is open or closed and reports this as a signal to the automation system. The control room can therefore see whether the valve has actually carried out the command.

The box usually carries a mechanical position indicator, so an operator in the field can see the valve position by eye without needing electrical power.

It is used with both pneumatic and electric actuators and mounts to the actuator through a standard interface.

WHERE IT IS USED

- Valve position feedback
- Status signal to the automation system
- Local position indication in the field

PENDING REVIEW

At least one data plate field of this product could not be read from the source catalog and was left blank. Blank fields have not been estimated. Please confirm the values with the company before a binding offer.

DATA SOURCE

All content in this datasheet is taken from the catalog page referenced above; values are transferred verbatim, with no estimation or unit conversion. It contains no price or stock information.
