

PNEUMATICALLY ACTUATED VALVES

Pneumatically Actuated Ball Valve

TECHNICAL DATA

The data plate fields for this product could not be read from the source catalog. Values must be confirmed by the company.

WHAT IT DOES

A ready assembly in which a ball valve and a pneumatic actuator are delivered together. The quarter-turn opening and closing movement of the valve is performed by compressed air.

When fully open a ball valve offers almost no resistance to flow and provides tight shut-off, which is why it is preferred on lines where on/off duty must be fast and positive. Combined with an actuator, this movement becomes remotely operable.

The actuator can be selected as single acting (spring return) or double acting. Valve size, body and sealing materials and actuator type are determined per project; it is enough to state the operating conditions of your line in your request.

WHERE IT IS USED

- Automated on/off lines
- Circuits requiring fast shut-off
- Remotely operated process lines

PENDING REVIEW

At least one data plate field of this product could not be read from the source catalog and was left blank. Blank fields have not been estimated. Please confirm the values with the company before a binding offer.

DATA SOURCE

All content in this datasheet is taken from the catalog page referenced above; values are transferred verbatim, with no estimation or unit conversion. It contains no price or stock information.
