

PNEUMATICALLY ACTUATED VALVES

Pneumatically Actuated Butterfly Valve

TECHNICAL DATA

The data plate fields for this product could not be read from the source catalog. Values must be confirmed by the company.

WHAT IT DOES

A ready assembly in which a butterfly valve and a pneumatic actuator are delivered together. The disc of the valve turns a quarter turn to open and close, and this movement is performed by compressed air.

In large diameters a butterfly valve takes up markedly less space than a ball valve and is lighter, which is an advantage for both installation and handling on wide lines. Combined with an actuator it becomes remotely operable.

The actuator can be selected as single acting (spring return) or double acting. Valve size, body and sealing materials and actuator type are determined per project.

WHERE IT IS USED

- Large diameter automated lines
- Remotely operated process lines
- Installations with space constraints

PENDING REVIEW

At least one data plate field of this product could not be read from the source catalog and was left blank. Blank fields have not been estimated. Please confirm the values with the company before a binding offer.

DATA SOURCE

All content in this datasheet is taken from the catalog page referenced above; values are transferred verbatim, with no estimation or unit conversion. It contains no price or stock information.
